**METRISO XTRA**

**High-Precision**

**Insulation, Low Resistance and Voltage Measurement Instrument**

- Insulation measurement per IEC/EN 61557-2
- Test voltages in fixed increments, variable or as a ramp 50 V, 100 V, 250 V, 500 V, 1000 V
- Polarization index and absorption ratio
- **Intelligent filter** – measurement-dependent and precise activation for the measurement of very high resistances
- Backlit dot matrix display for measured and limit values
- Signalling of dangerous contact voltage
- **Acoustic** signalling when limit value is exceeded
- Detection of interference voltage in switch position OFF
- **Overvoltage protection**
  - Protects the instrument in the event of inadvertent connection to mains power
    - Fuse link for all resistance measuring ranges
    - Electronic fuse for the protection of low resistance and resistance measurement $R_{LO}$ and $R$
- Low resistance measurement per IEC 61557-4
- Guard terminal for compensating surface current
- **Compact and rugged** For service calls under harsh conditions
- One measuring point self-test with test resistance of 10 MΩ per IEC/HD 60364-6 / EN 50110
- Bidirectional interface to ETC (report generating software)

**Features Overview**

<table>

**Display functions**

- Backlit display
- Limit value LED (green/red) for:
  - Additional acoustic signal, limit values per VDE 0100
  - $R_{SO}$ Uramp
- LED for dangerous contact voltage (when switched off)
- Battery level display

**Special functions**

- Discharge of capacitive devices under test
- Safety shutdown (UBatt < 8 V)
- Data storage in the instrument (database max. 50,000 structural elements)

**Features**

- Measuring category CAT II 1000 V / CAT III 600 V / CAT IV 300 V
- 1 MΩ test resistor
- Terminal: charging socket, USB interface (slave), RS232 interface
- DAkkS calibration certificate

**Application**

The insulation and resistance measuring instrument allows for quick and effective testing of protective measures in accordance with DIN VDE 0100, ÖVE-EN 1 (Austria), NIV/NIN SEV 1000 (Switzerland) and regulations specific to other countries as well. The instrument complies with IEC/EN 61557 regulations:

- Part 1: General requirements
- Part 2: Insulation resistance
- Part 4: Resistance at earthing conductors, protective conductors and equipotential bonding
- Part 10: Electric safety in low voltage systems up to AC 1000 V and DC 1500 V – Equipment for testing, measuring and monitoring protective measures

as well as requirements per VDE 0701-0702:

- Repair, modification and testing of electrical devices

The insulation measuring instruments are suitable for the following tasks:

- Measurement of insulation resistance at voltage-free devices and systems, up to 1000 V depending upon variant
- Checking of test objects for absence of voltage in systems up to 1 kV
- Testing of the resistance of earthing conductors, protective conductors and equipotential bonding
- Testing of electrostatic discharge capacity at floor coverings (using shielded measurement cables) – EN 1081
- With the so-called 1 mA test per DIN VDE 0845/EN 61645, the instrument also allows to perform on-site tests of the response voltage of overvoltage components (varistors, Zener diodes, etc.) of requirement categories B and C / SPD Type 2 and 3) and to evaluate the test results in accordance with manufacturer’s data.
Polarization Index

A polarization index test is recommended for electrical machines with coil modules (generator and motor coils). This procedure involves expanded testing of insulation resistance. A reduced insulation resistance is an indication of humidity absorption and fouling.

To this end, the DC measuring voltage of the METRISO XTRA is applied to the insulation for a duration of 10 minutes. The respective measured value is read after one and after ten minutes. If the insulation is faultless, the value measured after ten minutes is higher than the value measured after one minute. The relationship between the two measurement values is the polarization index.

Charged material within the insulation is aligned due to the application of DC measuring voltage over a long period of time, resulting in polarization. The polarization index indicates whether or not the charged material contained in the insulation can still be moved, thus allowing for polarization. This, in turn, is an indication of the condition of the insulation. The more the charged material can be moved, the better is the state of the insulation.

Discharging of Capacitive DUTs

Capacitive devices under test such as cables and coils which may charge up to test voltage are discharged via the test instrument while the voltage decrease can be monitored at the display.

Data Management and Report Generation

A complete distribution structure with customer, building and distributor data can be set up in the test instrument. This structure allows for the assignment of measurements to the distributors of different buildings and customers.

Intelligent filter

Measurement-dependent and precise activation for the measurement of very high resistances with:

- beating, i.e. compensation of 16 2/3 Hz and 50 Hz interferences
- attenuation of capacitive influences from power cables, etc.
- suppression of electric field influences

<tr>
<td>DAR</td>
<td>00:30 min</td>
<td>01:00 min</td>
<td>&gt; 1.60 min / &gt; 1.25 min</td>
</tr>
</tbody>
</table>

Pl and DAR are calculated values. The specifications of the insulation measurement apply.

---

**Reference Conditions**

- **Reference temperature**: +23 °C ±3 K
- **Relative humidity**: 40 ... 75%
- **Measured quantity frequency**: 45 Hz ... 65 Hz
- **Measured quantity waveshape**: Sine, deviation between TRMS and rectified value < 1%
- **Battery voltage**: 9.5 V ±0.1 V
- **Test resistor**: 10 MΩ ±1%
**Electrical Safety**
- **Protection class**: II per IEC/EN 61 010-1
- **Pollution degree**: 2
- **Measuring category**: CAT II 1000 V / CAT III 600 V / CAT IV 300 V
- **Fuse link**: FF315mA/1000V, effective in all resistance measuring ranges, 1 additional replacement fuse in the battery compartment for protecting low-resistance and resistance measurement \( R_{LO} \) and \( R \)

**Ambient Conditions**
- **Accuracy temperature range**: 0 ... +40 °C
- **Operating temperatures**: –10 ... +50 °C
- **Storage temperatures**: –25 ... +70 °C (without batteries)
- **Relative humidity**: up to 75% (max. 85% during storage/transport), no condensation allowed
- **Elevation**: max. 2000 m
- **Calibration interval**: 1 year (recommended)

**Electromagnetic Compatibility (EMC)**
- **Interference emission**: EN 61326-1:2006 class B
- **Interference immunity**: EN 61326-1:2006

**Displays**
- **Digital display**: Multiple display via dot matrix 128 x 128 pixels, backlit (transreflective);
  Dimensions: 65 mm x 65 mm
- **LED Limit**: LED lights up red to indicate an exceeded limit value
- **LED Limit**: LED lights up green to indicate adherence to the limit value
- **LED**: LED lights up red to indicate the presence of an external voltage (with the instrument switched off) or high test voltage during insulation measurement \( (\text{Riso/\text{Rins}, PI and DAR}) \) at the measuring terminals
- **LED Uramp**: LED lights up green to indicate the ramp sequence, LED lights up red to indicate the interruption of the ramp sequence (e. g. in case of breakdown)

**Mechanical Design**
- **Dimensions**: 225 mm x 130 mm x 140 mm
- **Weight**: approx. 1.5 kg with (rechargeable) batteries
- **Protection**: Housing IP 52, measurement cables and connectors IP 40 per DIN VDE 0470 part 1/EN 60529

**Power Supply**
- **Batteries (rechargeable batteries as an option)**: 8 ea. 1.5 V mignon cell (8 ea. size AA) (alkaline manganese per IEC LR14)
- **Rechargeable batteries**: we recommend only using the pack of rechargeable batteries article no. Z502H
- **Battery charger Z502R (as an option)**: Broad band charger with jack plug,
  Input: 100 ... 240 V AC;
  Output: 16.5 V DC, 1 A (Mascot)
- **Nominal range of use**: 8.5 ... 12 V
- **Battery test**: Battery capacity display with battery symbol in 4 segments
- **Battery saver circuit**: Automatic shutdown of display illumination after 10 ... 30 seconds (after the last time the rotary switch is actuated) can be set in the SETUP menu.
- **Service life** for \( R_{NS} \) (1000 V/1 MΩ), \( R_{LO} \) with 25 s on-time and 1 subsequent measurement each for a duration of 5 seconds:
  - with a set of batteries (alkaline manganese): 400 measurements
  - with a set of rechargeable batteries (2200 mAh): 650 measurements

**Charging socket**: Inserted rechargeable batteries can be directly recharged by connecting a charger to the charging socket: Charger Z502R

**Charging time**: approx. 2 hours *

* maximum charging time for totally depleted batteries.
A timer in the charger restricts the charging time to a maximum of 4 hours.

Floor Probe

The 1081 floor probe can be used for measuring the resistance of insulating floors in accordance with DIN VDE 0100 Part 600 and EN 1081.

Reel TR25

Drum with Measurement Cable TR50

50m measurement cable coiled around a plastic drum. Connection to one end of the cable is accomplished with a jack which is integrated into the drum. The other end is equipped with a banana plug. The drum axle with handle can be removed for space saving storage. Cable resistance component can be compensated for in selector switch position $R_{LO}$.

Test Probe for Remote Triggering Z550A

Connection example: module slot for INTRO / BASE / TECH / PRO / XTRA

START/STOP key

Key for measuring point illumination

Test probe

Safety collar

Measuring point illumination

Safety cap

Operating Case METRISO G (Z550C)

Magnetic measuring contacts (patent) with magnetic strain relief (Z502U)

Movable contact protection securely covers the magnetic contact by elastic force.
